CARVING KNIVES

**PRECISION ENGINEERING
FROM THE GROUND UP**

The Flexcut Pro Line is our latest release of premium knives redesigned from the ground up to deliver peak performance for the serious carver.

Our in-house team worked with customer feedback and the input of professional carvers to develop all new cutting-edge features, making this innovative & ergonomic design a must-have for your carving kit.

Blade - We took our famous blade steel back to the drawing board to engineer a true flat grind for ultimate performance. These precision heat treated blades boast our most precise and durable detail carving tips yet. Seriously, these blades might just redefine the word sharp as we know it, and with a larger clearance between the choil and heel of the cutting edge, you will have a more consistent stropping experience keeping you sharper for longer.

Handle - The all-new Flexcut Pro Handle is the direct result of extensive research and testing. Flat side-walls, bold facets, and curves in just the right places make this premium un-varnished cherry wood handle an absolute pleasure to hold. We removed bulk from under the blade to eliminate interference on tight cuts and added an index finger swell over the spine for extra power and superior control.

Continuous Design Improvements

Easy grip surface.

Bold Facets.

Larger surface area above blade for more grip styles and better control.

Precision heat treated blades

Minimal bulk blade choil to prevent interference during carving.
